Project Documentation on :

Startup Incubation Management System

Submitted By :

Samayam Gnana Naga Bhavya Sri

B.Tech Final Year

Department of Computer Science and Engineering

Academic Year : 2026-2027

Introduction

1.1 Introduction

Startup Incubation Management System is a cloud-based application developed on the ServiceNow platform to automate and streamline the complete startup incubation lifecycle. The application provides a centralized environment where startup founders, incubation administrators, mentors, and funding committees can collaborate efficiently throughout the incubation process.

The system enables startup founders to submit applications online, while administrators can review applications, approve or reject submissions, assign mentors, monitor startup progress through milestone tracking, process funding requests, and manage the overall incubation journey until graduation. Each activity is managed through automated workflows, notifications, role-based access control, and structured data management, eliminating the need for manual tracking.

Traditional incubation centers commonly rely on spreadsheets, emails, and paper-based documentation for managing startup information. These methods often lead to delayed communication, inconsistent record management, limited visibility into startup progress, and difficulties in monitoring funding utilization. The Startup Incubation Management System addresses these challenges by digitizing the entire process within the ServiceNow platform.

Using ServiceNow's low-code development capabilities, the application incorporates custom tables, forms, workflows, notifications, business rules, UI policies, access controls, and dashboards to improve operational efficiency. The system ensures transparency, accountability, and real-time monitoring while reducing administrative effort.

The proposed solution provides a scalable and secure platform that can support incubation centers, innovation hubs, universities, and startup accelerators in effectively managing multiple startups simultaneously.

1.2 Problem Statement

Startup incubation centers frequently manage applications, mentor assignments, milestone evaluations, and funding approvals using manual methods such as emails, spreadsheets, and paper-based documentation.

These traditional approaches present several challenges, including:

- Delayed application processing
- Difficulty in tracking startup progress
- Lack of centralized information
- Inefficient mentor allocation
- Poor visibility into milestone completion
- Delays in funding approvals
- Increased administrative workload
- Risk of data inconsistency and duplication
- Limited reporting and analytics
- Reduced transparency among stakeholders

These issues reduce operational efficiency and make it difficult to monitor startup performance effectively.

1.3 Proposed Solution

The proposed Startup Incubation Management System is designed using the ServiceNow platform to automate the complete startup incubation lifecycle.

The application provides:

- Online startup application submission
- Automated application review workflow
- Approval and rejection process
- Mentor assignment management
- Milestone planning and tracking
- Funding request management
- Automated approval workflows
- Reports and dashboards
- Centralized data management

The system enables administrators to manage incubation activities efficiently while providing startups and mentors with real-time visibility into the incubation process.

1.4 Scope of the Project

The scope of the Startup Incubation Management System includes:

- Startup registration and application management
- Application review and approval process
- Mentor allocation
- Milestone creation and monitoring
- Funding request submission
- Funding approval workflow
- Notification management
- Dashboard and reporting
- User role management
- Secure access using ServiceNow roles
- The project focuses on digitizing the internal operations of startup incubation centers and does not include external financial transactions or banking integrations.

1.5 Objectives

The primary objectives of the proposed system are:

- Automate startup application submission and review.
- Digitize the startup incubation workflow.
- Assign mentors to approved startups.
- Track startup milestones effectively.
- Manage funding requests through approval workflows.
- Improve communication among founders, mentors, and administrators.
- Reduce manual paperwork and administrative effort.
- Enhance transparency and accountability.
- Generate reports and dashboards for performance monitoring.
- Maintain secure and centralized startup records.
- Improve operational efficiency using workflow automation.

1.5 Technologies Used

Technology	Purpose
ServiceNow App Engine Studio	Application Development
ServiceNow Platform	Backend Development
Flow Designer	Workflow Automation
Business Rules	Server-side Automation
Client Scripts	Form Validation
UI Policies	Dynamic Form Behavior
ACL	Security
Service Catalog	Funding Request
Record Producer	Startup Registration
Update Sets	Change Management

1.6 Business Process Flow

SYSTEM IMPLEMENTATION

1.Update Set Creation :

Objective

Create a dedicated Update Set to capture all customizations performed during application development.

Navigation : Application Navigator → Update Sets → Local Update Sets → **New**
state→ **In progress**

The screenshot shows the ServiceNow 'Create New Update Set' form. The browser address bar indicates the URL: dev297508.service-now.com/now/nav/ui/classic/params/target/sys_update_set.do%3Fsys_id%3D-1%26sys_is_list%3Dtrue%26sys_target%3Dsys_update_set%26sysparm_checked_items... The ServiceNow header shows the application scope as 'Global' and the update set as 'Default [Global]'. The form fields are: Name (Startup Incubation Management System), State (In progress), Parent (empty), Release date (empty), and Description (Version 1 development). The Application is set to Global. The form has 'Submit' and 'Submit and Make Current' buttons. The Windows taskbar at the bottom shows the date as 04-08-2026 and the time as 10:02.

Figure 1.1: Creation of Local Update set

Purpose

To create an Update Set that captures all application customizations performed during the development of the Startup Incubation Management System. This enables easy migration of configurations between ServiceNow instances.

2.Scoped Application Creation :

Objective

Create a new scoped application using App Engine Studio.

Navigation : Application Navigator → App Engine Studio → **Create App**

Figure 1.2: Create a Scoped Application

Purpose:

To create a dedicated ServiceNow application that contains all project components including tables, forms, business rules, client scripts, workflows, reports, dashboards, and security configurations.

Click **continue**.

Figure 1.3: Creating Scoped Application

Figure 1.4: Scoped application Created

DATABASE DESIGN

3. Creating the Startup Application Table :

Objective

To create the primary business table that stores startup application details submitted by startup founders. This table serves as the entry point for the startup incubation process and acts as the foundation for subsequent modules such as mentor assignment, milestone tracking, and funding management.

Navigation: App Engine Studio → **Startup Incubation Management System**

Figure 1.5: Startup Application Table Creation

Navigate to → **Data** → **Add a table or upload a spreadsheet or pdf**

Figure 1.6: Creating the Startup application Table

Click **continue**.

Note : Admin role is mandatory for all the tables.

Click **continue**.

Figure 1.7: Adding fields to the Startup application table

Click **Save**.

Click **New** to open the form.

The screenshot shows the ServiceNow App Engine Studio interface for a 'Startup Application' form. The browser tabs include 'ServiceNow Developers', 'New Record | Startup Application', 'Startup Application - Default view', and 'App Engine Studio | ServiceNow'. The URL is 'dev297508.service-now.com/now/appenginestudio/my-apps/a9f298fc47ea8b10f0647bb4416d43d0'. The form is titled 'Startup Application' and is in 'New record' mode. It contains several fields: 'Number' (SAPPO001015), 'Startup Name', 'Founder', 'Website', 'Startup Category' (dropdown, value: -- None --), 'Startup Stage' (dropdown, value: -- None --), and 'Team Size'. There is a 'Startup Description' section with a rich text editor (Verdana, 8pt) and a 'Submit' button. Below the form, there are fields for 'Application Date', 'Status' (dropdown, value: -- None --), and 'Committee Remarks'. The bottom of the screen shows a Windows taskbar with various icons and a system tray displaying '12:09' and '04-08-2020'.

Figure 1.8: Startup Application form view.

The **Startup Application** table is successfully created with an auto-generated application number for every startup application.

Purpose:

The Startup Application table centralizes all startup registration information, enabling the incubation team to review, approve, and manage startup applications efficiently through a structured workflow.

4.Creating the Incubated Startup Table :

Objective

To create the Incubated Startup table, which stores details of startups that have successfully completed the application review process and have been admitted into the incubation program.

Navigation : App Engine Studio → Startup Incubation Management System → **Data** → + **Add** → **Create Table**

Figure 1.9: Incubated Startup table Created

Purpose:

The **Incubated Startup** table acts as the central business table for the incubation process. Modules such as **Mentor Assignment**, **Milestone Tracking**, **Funding Requests**, and **Meetings** will reference this table instead of the Startup Application table.

ServiceNow App Engine Studio

Incubated Startup

Figure 1.11: Preview of the Incubated Startup record creation form

A new table named **Incubated Startup** is created successfully.

5. Creating the Mentor Table:

Objective

To create the Mentor table for maintaining mentor information, including their expertise, experience, availability, and organizational details. This table will be used to assign mentors to incubated startups during the incubation process.

Navigation : Application Navigator → App Engine Studio → Startup Incubation Management System → Data → Add (+) → Create Table

Figure 1.12: Mentor Management Table Created

Purpose:

The Mentor table acts as the master repository of mentor information. It enables administrators to maintain mentor profiles and supports the mentor allocation process for approved startups.

The screenshot shows the ServiceNow App Engine Studio interface for configuring a table named "Mentor Management". The table fields are listed in a table with columns for Column label, Column name, Type, Reference, Max length, Default value, Display, and Updated.

Column label *	Column name *	Type *	Reference	Max length	Default value	Display	Updated
Mentor Name	mentor_name	String		40	Enter default value	☐	
Email	email	String		40	Enter default value	☐	
Phone Number	phone_number	Phone Number (E...)			Enter default value	☐	
Expertise	expertise	Choice (10 Choices)			Enter default value	☐

Showing 1-6 of 6 records. Records per page: 20.

Figure 1.13: Fields of Mentor Management Table.

The screenshot shows the form view for the "Mentor Management" table. The form contains the following fields:

- Number: MTR0001004
- Mentor Name:
- Email:
- Phone Number: (Other / Unknown)
- Organization:
- Current Assigned Startups:
- Bio:
- Designation:
- Expertise: (None)
- Experience:
- Availability: (None)
- Maximum Startups:

A "Submit" button is located at the bottom left of the form.

Figure 1.13: Form View of the mentor management Table.

The **Mentor** table is successfully created with an auto-generated mentor number.

6.Creating Milestone Management Table:

Objective

The objective of this sprint is to develop the **Milestone Management** module to track the progress of incubated startups. It records milestone details, deadlines, completion status, mentor remarks, and overall progress throughout the incubation lifecycle.

Navigation: Application Navigator → App Engine Studio → Startup Incubation Management System → Data → Add (+) → Create Table

Figure 1.14: Milestone Management table created.

Purpose:

The purpose of the Milestone Management module is to provide a structured mechanism for monitoring startup progress against predefined milestones. It enables administrators and mentors to identify pending, ongoing, completed, and delayed activities.

The screenshot shows the ServiceNow App Engine Studio interface. The top navigation bar includes 'Home', 'My Apps', 'Templates', and 'Resources'. The main content area is titled 'Milestone Management' and displays a table of fields. The table has columns for 'Column label * 1%', 'Column name *', 'Type *', 'Reference', 'Max length', 'Default value', 'Display', and 'Updated'. The 'Updated' column shows a timestamp of '2026-08-06 00:11:28'. The table lists 10 fields: 'Updates' (Integer), 'Incubated Startup' (Reference), 'Milestone Name' (String), 'Milestone Type' (Choice), 'Target Date' (Date), 'Completion Date' (Date), 'Status' (Choice), 'Progress' (Integer), and 'Mentor Remarks' (Journal Input). Each field has a 'Display' toggle switch. The bottom of the table shows 'Showing 1-6 of 6' records and 'Records per page 20'.

Column label * 1%	Column name *	Type *	Reference	Max length	Default value	Display	Updated
Updates	sys_mod_count	Integer				☐	2026-08-06 00:11:28
Incubated Startup	incubated_startup	Reference	Incubated Startup		Enter default value	☐	
Milestone Name	milestone_name	String		40	Enter default value	☐	
Milestone Type	milestone_type	Choice 6 Choices			Enter default value	☐	
Target Date	target_date	Date			Enter default value	☐	
Completion Date	completion_date	Date			Enter default value	☐	
Status	status	Choice 4 Choices			Enter default value	☐	
Progress	progress	Integer			Enter default value	☐	
Mentor Remarks	mentor_remarks	Journal Input			Enter default value	☐	

Figure 1.15: Fields of Milestone Management table.

The screenshot shows the ServiceNow App Engine Studio interface with the 'Milestone Management' form view. The form is titled 'New record' and includes a 'Submit' button. The form fields are: 'Number' (text input with value 'MLT0001006'), 'Incubated Startup' (text input with a search icon), 'Milestone Name' (text input), 'Milestone Type' (dropdown menu with value '-- None --'), 'Target Date' (date picker), 'Completion Date' (date picker), 'Status' (dropdown menu with value '-- None --'), 'Progress' (text input), and 'Mentor Remarks' (text area). The bottom of the form shows 'Showing 1-6 of 6' records and 'Records per page 20'.

Figure 1.16: Form view of Milestone Management.

The **Milestone Management** table is successfully created with an automatically generated milestone number.

7.Creating the Funding Request Management Table:

Objective

To develop the **Funding Request Management** module for recording and tracking funding requests submitted by incubated startups. The module manages requested amounts, funding purposes, approval status, approved amounts, and administrative remarks.

Navigation: Application Navigator → App Engine Studio → Startup Incubation Management System → Data → Add (+) → Create Table

Figure1.17: Funding Request Management Table Created.

Purpose:

The purpose of the Funding Request Management module is to provide a centralized mechanism for managing financial assistance requested by incubated startups. It helps administrators review funding requests and maintain their approval and disbursement status.

Column label * 1	Column name *	Type *	Reference	Max length	Default value	Display	Updated
Created	sys_created_on	Date/Time				☐	2026-08-07 20:28:34

Submit

Figure 1.19: Form view of Funding request Management Table.

The **Funding Request** table is successfully created with an automatically generated funding request number.

8.Automation & Approval Flow:

8.1 Startup Application Approval Workflow

Objective

To implement an automated Startup Application Approval Workflow in ServiceNow that allows the Incubation Manager to review startup applications and automatically update the application status based on the approval decision.

The workflow supports two outcomes:

- **Approved** → **Status = Approved**
- **Rejected** → **Status = Rejected**

Navigation: ServiceNow → App Engine Studio / Workflow Studio → Flows → Startup Application Approval Flow

Figure 1.20: Home page of workflow Studio

Click **New**.

Figure 1.21: Creating A New Startup Application Approval Flow.

Figure 1.22: Startup Application Approval Flow Created.

8.2 Configuration of Startup Application Creation Trigger

Navigation: Workflow Studio → Startup Application Approval Flow → Trigger → Add a trigger.

Figure 1.23: Configuring the Startup Application trigger

Click **Add a trigger**.

Trigger dropdown → Select **Created** → Table as **Startup Application** → Click **Done**.

Figure 1.24: Creating the startup application trigger

Click **Done**.

Purpose:

To automatically initiate the approval workflow whenever a new Startup Application record is created in the system.

8.3 Updating Application Status to Under Review

8.3.1 Add Create or Update Record:

Navigation: Workflow Studio → Startup Application Approval Flow → Actions
Servicenow core→ **Create or Update Record.**

Figure 1.25: Adding Create or Update Action.

The **Create or Update Record** action is used to update the Startup Application record when the approval workflow begins.

Steps:

- Select the **Create or Update Record** action.
- Select the **Startup Application Record** from the trigger as the record.
- Select the **Startup Application** table.
- Add the **Status** field.
- Set the Status value to **Under Review**.

Figure 1.26: Configuring the Create or Update Record action

- Click **Done** to save the action.

Purpose:

To automatically change the application status to **Under Review** when a new Startup Application enters the approval workflow.

8.4 Configuring the Approval Action

8.4.1 Add Ask for Approval Action:

Navigation: Workflow Studio → Startup Application Approval Flow → Add an Action → Ask for Approval.

Figure 1.27 : Ask for Approval action for the Incubation Manager

Click **Ask for approval on Startup Application**.

steps:

- In the **Record** field, select the **Startup Application Record** from the trigger.
- Verify that the **Startup Application** table is selected.
- Enter the **Approval Reason**:
Startup application approval required for incubation review.
- Configure the **Approval Field** to store the approval state of the application.
- Under **Rules**, configure the approval outcome as **Approve**.
- Select **Anyone approves** as the approval condition.
- Select **Incubation Manager** as the approver.
- Configure the **Rejected** outcome so that the approval action can return a **Rejected** state when the Incubation Manager rejects the application.

Figure 1.28: Configuring the Ask for Approval action with approval and rejection outcomes

- Click **Done** to save the configuration.

Purpose:

To request approval from the **Incubation Manager** and capture the resulting approval state, including **Approved** and **Rejected**, so that the flow can process each outcome appropriately.

8.5 Checking the Approval Status

This is the FIRST If block immediately after Ask for Approval.

8.5.1 Configure Check Approval Status:

The first conditional branch evaluates whether the Startup Application has been approved by the Incubation Manager.

Steps:

- Click **Add Flow Logic** after the **Ask for Approval** action.
- Select **If**.
- Set the **Condition Label** to:
Check Approval Status
- For **Condition 1**, select the **Approval State** from the **Ask for Approval** action.
- Set the operator to **is**.
- Select **Approved**.

Figure 1.29: Configuring the approval status condition

If Check Approval Status:

Approval State → is → Approved.

Click **Done**.

8.5.2 Configure Update Record for Approved Applications:

This action is placed under the **Then** branch of **Check Approval Status**.

Steps:

- Under **Check Approval Status**, select the **Then** branch.
- Add **Update Record**.
- Select the **Startup Application Record**.
- Select the **Startup Application** table.
- Add the **Status** field.
- Set Status to **Approved**.

Figure 1.30: Updating the Startup Application status to Approved

Check Approval Status:

Update Record → Status → Approved

Click **Done**.

Purpose:

To automatically update the Startup Application status to Approved when the Incubation Manager approves the application.

8.6 Checking the Rejection Status

This is the SECOND IF block after the approval branch.

8.6.1 Configure Check Rejection Status:

The second conditional branch checks whether the Startup Application has been rejected by the Incubation Manager.

Steps:

- Add another **If** flow logic after the approval-status section.
- Set the **Condition Label** to:
Check Rejection Status
- For **Condition 1**, select the **Approval State** from the **Ask for Approval** action.
- Set the operator to **is**.
- Select **Rejected**.

Figure 1.31: Configuring the rejection status condition

Condition: **Approval State** → **is** → **Rejected**

Click **Done**.

8.6.2 Configure Update Record for Rejected Applications:

This action is placed under the Then branch of Check Rejection Status.

Steps:

- Under **Check Rejection Status**, select the **Then** branch.
- Add **Update Record**.
- Select the **Startup Application Record**.
- Select the **Startup Application** table.
- Add the **Status** field.
- Set Status to **Rejected**.

Figure 1.32: Updating the Startup Application status to Rejected

Condition: Update Record → Status → Rejected

Click **Done**.

Purpose:

To automatically update the Startup Application status to **Rejected** when the Incubation Manager rejects the application.

8.7 Final Startup Application Approval Flow :

Description:

The completed Startup Application Approval Flow is shown below. The flow is configured to automatically initiate when a Startup Application record is created, request approval from the Incubation Manager, and update the application status based on the approval decision. Separate conditions are configured to handle both approved and rejected applications.

Figure 1.33: Final Startup Application Approval Flow

Outcome:

The Startup Application Approval Flow was successfully configured and published in ServiceNow. The workflow automatically processes startup applications by initiating an approval request and updating the application status based on the Incubation Manager's decision. Both approval and rejection scenarios are handled through dedicated conditional branches.

9. Dashboard and Reports Creation and Configuration:

Objective : To visualize the current status of startup applications.

Navigation : All → Reports → View / Run → Create New.

Table: Startup Application

Figure 1.37: Application Date Report

Description:

A report was created using the application date information from the Startup Application table. The report helps provide an overview of startup application activity over time.

The report was added to the dashboard for centralized monitoring.

Outcome:

The Application Date report was successfully created and added to the dashboard.

Save and continue creating reports for all the data..

9.1 Dashboard Creation :

Navigation : All → Self-Service → Dashboards → Dashboards → New.

Description:

The dashboard provides a consolidated view of important startup incubation information and enables administrators or incubation managers to monitor applications, funding requests, milestones, and application statuses from a single interface. A dedicated dashboard was created within ServiceNow to present the system information using graphical reports and visual elements.

Figure 1.34: Dashboard Creation

Outcome:

The dashboard was successfully created for the Startup Incubation Management System. It provides a centralized interface for monitoring and analyzing important application and incubation-related information.

9.2 Adding Dashboard Elements :

Objective

To add relevant reports and visualization components to the newly created dashboard.

Navigation: All → Self-Service → Dashboards → Open the Startup Incubation Management System Dashboard → Edit → Add new element.

Description

After creating the dashboard, relevant reports and visualization elements were added. These elements were selected based on the major functionalities of the application and provide a consolidated view of startup-related information.

Figure 1.35: Adding Dashboard Elements

Add elements and click **Save**.

Figure 1.36: View after Adding Dashboard Elements.

Outcome:

The required dashboard elements were successfully added.

10. Final Verification and Testing

10.1 Pre-Testing Verification:

Objective

To verify that all major tables, workflows, modules, and dashboard components are properly configured before starting the final testing phase.

Navigation:

All → Startup Incubation Management System.

Description:

Before testing the application, all major components of the Startup Incubation Management System were reviewed to ensure that the required tables, forms, flows, and dashboard components were available and properly configured.

The following components were verified:

- ☒ Startup Application Management
- ☒ Incubated Startup Management
- ☒ Mentor Management
- ☒ Milestone Management
- ☒ Funding Request Management
- ☒ Approval Flow
- ☒ Dashboard and Reports
- ☒ Update Set

Outcome:

All major application components were verified successfully and the system was ready for final functional testing.

10.2 Startup Application Testing:

Objective

To verify that a startup application can be created and processed successfully.

Navigation:

All → Startup Incubation Management System → Startup Application

Description:

A startup application record was opened and its required details were verified. The application information, startup details, founder information, category, stage, team size, application date, and status were checked to ensure that the record was functioning correctly.

The screenshot displays a web browser window with multiple tabs open, including 'ServiceNow', 'Startup Ap', 'S | Startup', 'Startup In', 'Funding R', 'Milestone', 'Mentor M', 'Incubated', and 'Incubated'. The active tab shows a URL from 'dev297508.service-now.com'. The page title is 'Startup Application 5'. The form contains the following fields:

- Number: SAPP0001042
- Startup Name: PayWise
- Founder: Abel Tuter
- Website: (empty)
- Startup Category: FinTech
- Startup Stage: MVP
- Team Size: 5
- Startup Description: A digital platform that helps students manage their expenses, savings and personal finances
- Application Date: 2026-08-10
- Status: requested
- Committee Remarks: (empty)

At the bottom of the form, there are 'Update' and 'Delete' buttons. The Windows taskbar at the bottom shows the date as 20-08-2026 and the time as 21:43.

Figure 1.38: Startup Application Testing

Outcome:

The Startup Application module was successfully verified.

10.3 Approval Workflow Testing:

Objective

To verify that the configured approval workflow processes an application correctly.

Navigation:

All → My Approvals → Open the Startup Application Approval Request

Description

The approval request generated by the Startup Application Approval Flow was opened and processed.

The application was approved to verify that the approval branch of the workflow executes correctly and updates the application accordingly.

The screenshot displays the ServiceNow interface for an approval request titled "Approval - Startup Application : 5". The interface includes a top navigation bar with tabs for "All", "Favorites", "History", and "Workspaces". The main content area shows the approval details for "Startup Application : 5". A dropdown menu is open, showing options: "Requested", "Not Yet Requested", "Approved", "Rejected", "Cancelled", and "No Longer Required". The "Approved" option is selected. Below the dropdown, there is a "Post" button. The "Activities" section shows a list of activities, including "System Administrator" and "Incubation Manager". The "Field changes" section shows a timestamp of "2026-08-20 07:50:26". At the bottom, there is a summary of the item being approved, "Startup Application".

Figure 1.39: Startup Application Approval Testing

Click Update.

The screenshot displays a ServiceNow 'Startup Application' form. The form fields are as follows:

- Number: SAPP0001042
- Startup Name: PayWise
- Founder: Abel Tuter
- Website: (empty)
- Startup Category: FinTech
- Startup Stage: MVP
- Team Size: 5
- Startup Description: A digital platform that helps students manage their expenses, savings and personal finances
- Application Date: 2026-08-10
- Status: Approved
- Committee Remarks: (empty)

At the bottom of the form, there are 'Update' and 'Delete' buttons. The status 'Approved' is highlighted in blue. The browser's address bar shows the URL: dev297508.service-now.com/x_1959079_startu_0_startup_application.do?sys_id=6e11bcc247be4350f0647bb4416d43df&sysparm_record_target=x_1959079_startu_0_startup_applicatio... The browser's taskbar at the bottom shows the date as 20-08-2026 and the time as 21:44.

Figure 1.40: Startup Application Approved

Outcome:

The approval workflow executed successfully and the application was processed through the approval path.

10.4 Rejection Workflow Testing

Objective

To verify that the rejection branch of the approval workflow works correctly.

Navigation:

All → My Approvals → Open the Startup Application Approval Request

Description

A startup application approval request was processed using the rejection option. A rejection reason was provided and the request was submitted.

This verified that the configured rejection branch handles rejected applications correctly.

The screenshot displays the ServiceNow interface for an approval request titled "Approval - Startup Application : 7". The form is in the "Approving" state, with the approver set to "Incubation Manager". A dropdown menu for the "State" field is open, showing options: "Not Yet Requested", "Requested", "Approved", "Rejected" (highlighted in blue), "Cancelled", and "No Longer Required". The "Approval Reason" field contains the text "ation review.". Below the form, the "Activities" section shows a single activity by "System Administrator" with the role "Incubation Manager" and the state "Requested". The bottom of the screen shows a summary of the item being approved, "Startup Application", and a taskbar with system information like "31°C Mostly cloudy" and "21:47 20-08-2026".

Figure 1.41: Startup Application Rejection Testing

Click **Update**.

The screenshot displays the ServiceNow 'Startup Application' form. The form includes fields for Number (SAPP0001044), Startup Name (MediConnect), Founder (Abraham Lincoln), Website, Startup Description (A platform connecting patients with healthcare providers for easy appointments scheduling and consultation.), Application Date (2026-08-26), Status (Rejected), and Committee Remarks. The Status field is highlighted in blue. The form has 'Update' and 'Delete' buttons at the bottom. The browser address bar shows the URL: dev297508.service-now.com/now/nav/ui/classic/params/target/x_1959079_startup_0_startup_application.do%3Fsys_id%3Dd1f08e47f6cf10f0647bb4416d4312%26sysparm_record_list... The browser tabs include 'ServiceNow', '7 | Start...', '7 | Start...', 'Approv...', 'Startup', 'Fundin...', 'Milesto...', 'Mentor', 'Incubat...', 'Incubat...', and 'Ask Gemini'. The browser's address bar also shows 'School'. The ServiceNow header includes 'All', 'Favorites', 'History', 'Workspaces', 'Admin', and 'Startup Application - 7'. The application scope is 'Startup Incubation Management System' and the update set is 'Default [Startup Incubation Management System]'. The bottom of the screen shows a Windows taskbar with a search bar, various application icons, and system tray information including '31°C Mostly cloudy', 'ENG IN', and '21:48 20-08-2020'.

Figure 1.42: Startup Application Rejected

Outcome:

The rejection workflow executed successfully and the rejection reason was recorded.

10.5 Mentor Management Verification:

Objective

To verify that mentors can be created, managed, and assigned correctly to incubated startups.

Navigation:

All → Startup Incubation Management System → Mentor Management

Testing:

- Verify mentor records are displayed correctly.
- Verify mentor details such as name, expertise, availability and contact information.
- Verify mentors can be assigned to incubated startups.
- Verify the assigned mentor is reflected correctly in the corresponding startup record.

Figure 1.43 : Mentor Management list showing the available mentors and their details.

Open any record to see the mentor details.

Mentor Management
MTR0001004

Number	MTR0001004	Designation	BTECH
Mentor Name	Bhavya Sri	Expertise	Artificial Intelligence
Email	sri9090@gmail.com	Experience	2
Phone Number	Australia	Availability	Available
	+61 441 652 920	Maximum Startups	1
Organization	CITY		
Current Assigned Startups	1		
Bio			

[Update](#) [Delete](#)

[\[SN Utils\] Versions \(0\)](#)

Figure 1.44: Mentor Management record showing their details.

Outcome:

The Mentor Management module was successfully verified, and mentor records and assignments were functioning as expected.

10.6 Milestone Management Testing:

Objective

To verify that startup milestones can be tracked and updated correctly.

Navigation:

All → Startup Incubation Management System → Milestone Management

Description

A milestone record was opened and the milestone details, target date, completion date, status, and progress were verified.

The milestone information was updated to confirm that milestone tracking works correctly.

The screenshot displays the ServiceNow interface for Milestone Management. The main form is titled "Milestone Management" and "MLT0001013". It includes fields for "Number" (MLT0001013), "Incubated Startup" (IST0001015), "Milestone Name" (Incubated Startup), "Milestone Type", "Mentor Remarks", "Target Date" (2026-07-26), "Completion Date" (2026-08-31), "Status" (In Progress), and "Progress" (80). There are "Update" and "Delete" buttons at the bottom left. A modal form titled "Incubated Startup" is open, showing details for "IST0001015". This modal includes fields for "Number" (IST0001015), "Incubation Start Date" (2026-08-02), "Expected Graduation Date" (2026-10-10), "Assigned Mentor" (Abel Tuter), "Incubation Status" (Graduated), "Total Funding Received" (\$200,000.00), "Current Milestone", and "Startup Rating". There is an "Open Record" button at the top right of the modal. The browser tabs at the top show "ServiceNow Developers", "Incubated Startups | ServiceNow", "MLT0001013 | Milestone Mana...", and "Approvals | ServiceNow". The browser address bar shows a URL from dev297508.service-now.com. The Windows taskbar at the bottom shows the date and time as 21:58 on 20-08-2026.

Figure 1.45: Milestone Management Testing

Outcome:

The Milestone Management module was successfully verified.

10.7 Funding Request Testing:

Objective

To verify that funding requests can be created and processed correctly.

Navigation:

All → Startup Incubation Management System → Funding Request Management

Description

A funding request was opened and the requested amount, funding type, purpose, status, approved amount, and approval date were verified.

The screenshot displays the ServiceNow 'Funding Request Management' interface for record FND0001005. The main form contains the following fields:

- Number: FND0001005
- Funding Type: Seed Funding
- Status: Approved
- Approved Amount: \$ 450,000.00
- Approval Date: 2026-09-15

A modal window titled 'Incubated Startup' is open, showing details for record IST0001006:

Field	Value
Number	IST0001006
Incubation Start Date	2026-08-17
Startup Application	4
Expected Graduation Date	2026-09-30
Assigned Mentor	Bhavya sri
Incubation Status	Active
Incubation Batch	
Office Allocation	
Total Funding Received	\$100,000.00
Current Milestone	
Startup Rating	

Figure 1.46: Funding Request Testing

Outcome:

The Mentor Management module was successfully verified, and mentor records and assignments were functioning as expected.

10.8 Incubated Startup Verification:

Objective:

To verify that incubated startup records are created and managed correctly and that the startup information is properly linked with mentor assignment, incubation status, dates, and funding details.

Navigation:

All → Startup Incubation Management System → Incubated Startups

Testing:

- Verify that incubated startup records are displayed correctly.
- Verify the **Startup Application** reference is linked correctly.
- Verify the **Assigned Mentor** is displayed correctly.
- Verify the **Incubation Status** is updated correctly.
- Verify the **Incubation Start Date** and **Expected Graduation Date**.
- Verify **Total Funding Received** is displayed correctly.
- Verify other important startup details are populated correctly.

The screenshot displays the ServiceNow interface for an 'Incubated Startup' record (IST0001006). The record is titled 'Incubated Startup - IST0001006' and is part of the 'Startup Incubation Management System'. The record is currently in the 'Update' state. The 'Assigned Mentor' field is populated with 'Bhavya sri'. The 'Incubation Status' field is set to 'User'. The 'Total Funding Received' field is set to '100,000.00'. The 'Current Milestone' field is set to 'Startup Rating'. The 'Startup Rating' field is set to 'Senior Developer'. The 'Department' field is set to 'Finance'. The 'Active' checkbox is checked. The 'Identity type' is set to 'Human'. The 'Web service access only' checkbox is unchecked. The 'Internal Integration User' checkbox is unchecked. The 'User' section shows the following details: User ID: bhavya1100, Email: bhavya@gmail.com, First name: Bhavya, Last name: sri, Title: Senior Developer, Department: Finance, Password: Password needs reset, Locked out: Locked out, Active: Active, Identity type: Human, Web service access only: Web service access only, Internal Integration User: Internal Integration User. The 'Incubation Batch' field is empty. The 'Office Allocation' field is set to '100,000.00'. The 'Business phone' field is set to '(995) 168-2458'. The 'Mobile phone' field is set to '(996) 457-6215'. The 'Time zone' field is empty. The 'Date format' field is set to 'MM-dd-yyyy'. The 'Calendar integration' field is set to 'Outlook'. The 'Notification' field is set to 'Enable'. The 'Language' field is set to 'English'. The 'Photo' field is empty. The 'Update' and 'Delete' buttons are visible at the bottom left of the record. The bottom of the screen shows the Windows taskbar with the date and time '21:55 20-08-2026'.

Figure 1.47: Incubated startup showing the assigned mentor.

The screenshot displays the ServiceNow interface for the 'Incubated Startup' module. A modal window titled 'Startup Application' is open, showing details for a specific application. The main form in the background contains fields for 'Number' (IST0001006), 'Incubation Start Date' (2026-08-17), 'Expected Graduation Date' (2026-09-30), 'Startup Application' (4), 'Assigned Mentor', 'Incubation Status', 'Total Funding Received' (100,000.00), 'Current Milestone', and 'Startup Rating'. The modal window contains the following fields:

Startup Application	
Number	SAPP0001023
Startup Category	AIML
Startup Name	Incubation Management
Startup Stage	Idea
Founder	Bhavya sri
Team Size	4
Website	
Startup Description	
Application Date	2026-08-11
Status	

Buttons for 'Update' and 'Delete' are visible at the bottom left of the main form. The bottom of the screen shows a Windows taskbar with the date 20-08-2026 and time 21:52.

Figure 1.48: Incubated Startup showing the assigned Startup application and other details

Outcome:

The Incubated Startup module was successfully verified. The startup records, mentor assignment, incubation details, and funding information were displayed and functioning correctly.

10.9 Final System Validation:

Objective

To perform the final validation of the complete Startup Incubation Management System.

Navigation:

All → Startup Incubation Management System

Description

After completing the functional tests, the complete application was reviewed once again.

The final validation confirmed the working of:

- ☒ Startup Applications
- ☒ Approval and Rejection Workflow
- ☒ Incubated Startups
- ☒ Mentor Assignment
- ☒ Milestone Management
- ☒ Funding Requests
- ☒ Dashboard and Reports

All major functionalities were found to be working as intended.

Outcome:

The Startup Incubation Management System successfully completed the final verification and functional testing phase.

10.10 Update Set Verification and Completion:

Objective : To verify that all the configuration changes made during the development of the Startup Incubation Management System were successfully captured in the project Update Set and to complete the Update Set after development.

Navigation: All → System Update Sets → Local Update Sets.

Description

The Local Update Sets list was opened and the Startup Incubation Management System Update Set was reviewed. The Update Set was checked to ensure that the configuration changes created during the development of the application were captured successfully. After verifying the captured changes, the project Update Set state was changed from In Progress to Complete. This confirms that the development changes associated with the project were successfully recorded in the Update Set.

Figure 1.49: Completed Startup Incubation Management System Update Set

Outcome

The project Update Set was successfully verified and moved to the Complete state, completing the configuration and development phase of the Startup Incubation Management System.

11. Project Finalization

Description

The **Startup Incubation Management System** was successfully developed, configured, tested, and validated using the **ServiceNow platform**. The system was designed to provide a centralized and structured platform for managing the complete lifecycle of startups within an incubation environment.

The application manages the startup journey from the initial **Startup Application** through the review and approval process, incubation, mentor assignment, milestone tracking, funding management, and final monitoring through dashboards.

The major components implemented in the system include:

- **Startup Application Management** – Captures and manages startup applications with relevant founder, category, stage, team, and application details.
- **Approval Workflow** – Automates the review process and handles both approval and rejection scenarios with appropriate status updates and rejection reasons.
- **Incubated Startup Management** – Maintains approved startups and their incubation-related information.
- **Mentor Management** – Maintains mentor information and supports assigning mentors to incubated startups.
- **Milestone Management** – Enables tracking of startup milestones, target dates, completion dates, status, progress, and mentor remarks.
- **Funding Request Management** – Records funding requests, funding types, requested amounts, approval status, approved amounts, and funding purposes.
- **Dashboard and Reporting** – Provides a centralized visual representation of startup applications, application statuses, funding, milestones, and mentor information.
- **Update Set Management** – Ensures that the application's configuration and development changes are captured for deployment and maintenance.

The system was tested module by module to verify the functionality and relationships between the different components. The approval workflow was specifically validated using both **Approved** and **Rejected** scenarios. Reference relationships between Startup Applications, Incubated Startups, Mentors, Milestones, and Funding Requests were also verified.

The final dashboard provides an overall view of the system through multiple reports and KPI elements, allowing important startup incubation information to be monitored from a single interface. The project Update Set was reviewed after development and moved to the **Complete** state, confirming that the required configuration changes were captured successfully.

Details of Startup Incubation Management System:

Figure 1.50: Startup Incubation Management System.

Figure 1.51: Data present in Startup Incubation Management System.

Figure 1.52 :Application Modules of Startup Incubation Management System

Figure 1.53: Application Security Configuration

Final Outcome:

The **Startup Incubation Management System** successfully provides an integrated platform for managing startup incubation activities in a structured and efficient manner. The system reduces manual management efforts, improves visibility into startup progress, supports systematic approval and funding processes, and provides centralized reporting through the dashboard.

All major modules, workflows, reference relationships, records, reports, and dashboard components were **implemented, tested, and verified successfully**.
